Max Lord				
Period 1	Number of Workers	Runtime (s)		
10/29/17	1	27.151		The manager divides the probabilities into batches, each
	2	15.674		with as many probabilities as available workers. It then loops
Grid: 120x160	3	10.828		through the batch and sends a probability to a worker. After receiving
Delta-p: .05	4	13.58		the results from its workers, the manager then sends the next batch
Trials: 100	8	10.325		to the workers until there are no more probabilities left.
Serial: 37.941s	12	7.043		
	16	14.214
